## SUMMARY

Software engineer with 2 years of experience owning features end to end on a production edtech LMS (Angular, Node.js, MongoDB) covering live classes, payments, and WhatsApp workflows, as part of a small team working directly with the company director. Strong in third-party integrations and production reliability; targeting full-stack roles at product companies, with a growing focus on AI-enabled features.

## TECHNICAL SKILLS

**Languages:** JavaScript, TypeScript, Python, SQL
**Frontend & Mobile:** Angular (SSR), React.js, Capacitor (Android), HTML5, CSS3, Tailwind CSS
**Backend:** Node.js, Express.js, REST APIs, Frappe Framework / ERPNext
**Databases:** MongoDB, MySQL, MariaDB, PostgreSQL, Redis
**Integrations:** Razorpay, Meta WhatsApp Cloud API, Zoom API, Firebase (FCM), Google Sign-In, Mailjet
**Cloud & DevOps:** AWS (EC2, S3), Nginx, PM2, GitHub Actions CI/CD, Docker (basic)
**Tools:** Git, GitHub, Postman, Linux, VS Code

## PROFESSIONAL EXPERIENCE

**Software Engineer | Evara Technologies** November 2024 – Present | Navi Mumbai, India

*Evara Elevate: edtech LMS with student and expert/tutor flows. Angular SSR, Node.js/Express, MongoDB, deployed on AWS EC2 with PM2 and Nginx.*

***Web Platform & Mobile***

- **Built end-to-end features** across Angular UI, Node/Express APIs, business logic, authentication, validation, and MongoDB operations for student and expert/tutor flows.
- **Built a digital products module** (listing, detail, and expert views) with a backend review workflow modeled on the course approval flow, and redesigned PDF certificate generation.
- **Converted the web platform into an Android app** with Capacitor, adding biometric login, FCM push notifications, and offline detection, and fixing a logout-when-offline bug.

***Integrations***

- **WhatsApp (Meta Cloud API):** implemented OTP login with Redis-based storage (1,000+ OTPs delivered), webhook-driven auto-replies, and fixes for production token and template errors.
- **Zoom API:** built and maintained integrations powering 80+ live sessions, including meeting creation, host/co-host role management, and account-level configuration.
- **Razorpay payments:** implemented payment status handling, validation, and API communication; also integrated Firebase, Google Sign-In, and Mailjet.

***Reliability & DevOps***

- **Resolved recurring production incidents** (server downtime from unbounded log/RAM growth, SSL certificate renewals, Nginx misconfigurations), restoring service without extended outages.
- **Automated deployments with GitHub Actions,** cutting 45 minutes to 1 hour from every release compared with the manual process.

***Internal Automation (Frappe / ERPNext)***

- **Built leave automation and HR workflows** covering 200+ employees, including custom reports and MariaDB-backed scheduled jobs.
- **Engineered an attendance pipeline** that syncs punch data from eSSL biometric devices into ERPNext via a Python script, auto-generating attendance entries with in/out times and total working hours.

## PROJECTS

**PDF-to-Excel Desktop App** Python, pdfplumber, pywebview, PyInstaller, Inno Setup

- Built an offline Windows app that converts PDF tables to Excel, secured with an **RSA-signed, hardware-locked license** and packaged with a PyInstaller/Inno Setup installer for direct client delivery.

## EDUCATION & CERTIFICATIONS

**B.Tech in Computer Science & Engineering | MIT College of Engineering** 2020 – 2024 | CGPA: 8.42
**Full-stack App Development with Frappe Framework (Python)** | Frappe School View certificate
**Python 101 for Data Science (PY0101EN)** | IBM / Cognitive Class View certificate
