SUMMARY

Software Engineer with 2 years of professional experience developing and maintaining production web applications using Angular, React.js, Node.js, TypeScript, and REST APIs. Experienced in building end-to-end features, backend services, authentication workflows, third-party integrations, database operations, and production troubleshooting. Hands-on experience integrating Razorpay, Meta WhatsApp Cloud API, Zoom, Firebase, and Google Sign-In, along with enterprise application development using Frappe Framework and ERPNext.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL

Frontend: Angular, React.js, HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express.js, REST APIs, Frappe Framework

Databases: MongoDB, MySQL, MariaDB, PostgreSQL, Redis

Integrations: Razorpay, Meta WhatsApp Cloud API, Zoom API, Firebase, Google Sign-In, Mailjet

Cloud & DevOps: AWS, Amazon S3, Nginx, PM2, Docker

Tools: Git, GitHub, Postman, Linux, VS Code

PROFESSIONAL EXPERIENCE

Software Engineer | Evara Technologies | November 2024 – Present | Navi Mumbai, India

- Develop and maintain production web applications using Angular, React.js, Node.js, TypeScript, and REST APIs, working across frontend, backend, database, and integration layers.
- Build end-to-end features covering UI development, API development, business logic, authentication, validation, and database operations.
- Integrate third-party platforms including Razorpay, Meta WhatsApp Cloud API, Zoom, Firebase, Google Sign-In, and Mailjet into application workflows.
- Implemented WhatsApp OTP verification and Redis-based OTP storage for authentication, delivering 1,000+ OTP messages through transactional WhatsApp notification workflows.
- Developed and maintained Zoom API integrations powering 80+ live sessions, including meeting creation, host/co-host role management, and account-level configuration handling.
- Integrate and maintain Razorpay payment workflows, including payment status handling, validation, API communication, and related application logic.
- Diagnosed and resolved recurring production incidents — including server downtime from unbounded log/RAM growth, SSL certificate renewals, and Nginx misconfigurations — restoring service without extended outages.
- Automated application deployment with GitHub Actions, cutting per-release deployment time by 45 minutes to 1 hour compared to the prior manual process.
- Built leave automation and HR workflows in Frappe/ERPNext covering 200+ employees, including custom reports and MariaDB-backed scheduled jobs.
- Engineered an automated attendance pipeline that syncs punch data from eSSL biometric devices into ERPNext, auto-generating employee attendance entries with in/out times and calculating total working hours via a Python backend script.
- Collaborate using Git-based development workflows, including feature branches, code integration, merge conflict resolution, testing, and deployment.
- Built an offline Windows desktop app in Python (pdfplumber, pywebview) that converts PDF tables to Excel, with an RSA-signed, hardware-locked license and a PyInstaller/Inno Setup installer for direct client delivery.

EDUCATION

MIT College of Engineering | B.Tech in Computer Science & Engineering | CGPA: 8.42 | 2020 – 2024

CERTIFICATION

Full-stack App Development with Frappe Framework | Frappe Framework
